

Five products, one house

GeoApps, MapServices, MapTalk, TouchTable and ESG Maps. Built in Deventer, meant to work together.

MapGear is not a reseller catalogue. It is one Geo-ICT house: data in, apps on top, meetings around it. You do not buy five islands.

WHY AS A HOUSE

Same map

MapServices data lands in GeoApps.
MapTalk and ESG Maps read the same layers.

Same meeting

TouchTable shows that map in the room
— no extra export.

Same team

Implementation, hosting and development from Deventer.

WHO IT IS FOR

Municipalities

Provinces

Water boards

Grid operators

Consultancies

Housing

National government

Education

HOW IT FITS

From data to decision

01

Data

MapServices: files, OGC, hosting.

02

Apps

GeoApps: viewer, dashboard, field, QGIS.

03

People

MapTalk, ESG Maps, TouchTable on the same map.

THE FIVE LINES

GeoApps

Online GIS: viewers, dashboards and workflows without desktop GIS for everyone.

MapServices

Geodata and web services that feed the rest of the stack.

MapTalk

Participation on the map, not a PDF survey.

TouchTable

Multitouch 4K: the meeting sits on the GIS map.

ESG Maps

Solar, heat, green, climate — modules on GeoApps.

One contract

One house, not five parallel projects.
